

## Cape Vrutak (Spring)

*The best diving experience can be achieved at Vrutak. The walls and plateaus, stepwise descend down to over 50 meters and are vastly covered in red gorgonians. While diving, you can meet scorpionfish, John Dories, congers, lobsters, crabs, anglers, etc.*

*The spring's crater starts at 43 meters, but the most interesting is the mere spring at 51 meters. In winter, when there is quite a lot of rain, the springs are more active and they form large circular patterns on the surface. In summer, when the springs are almost inactive or have no activity at all, you can enter the spring and reach a chamber at 70 meters of depth where you can see a large stalagmite. The divers diving with air can stay at this chamber for a couple of minutes, so it is more suitable for those diving on Trimix.*
